jacobmary.tapere007@gmail.com · +63 993 223 7994 · jacob-mary-tapere.vercel.app

Filipino Citizen in Cebu City, Philippines

Full Stack Software Engineer with a Degree in Information Technology. Builds with React, React Native, TypeScript, JavaScript, HTML, and CSS on the frontend, and Go, Node.js/NestJS on the backend, designing RESTful APIs on SQL (PostgreSQL, MySQL) and NoSQL databases using this stack to ship reliable features quickly. Track record leading full-stack delivery on capstone and freelance projects, taking ownership end-to-end so teams and clients get working software without managing the details themselves.

Education & Certificates

- B.S. in Information Technology from University of Cebu – Banilad Graduated - Jun 2026
- CCNA: Switching, Routing, and Wireless Essentials – Cisco Networking Aug 2024 – May 2025

Work History/Projects/Internships

Full Stack Web/Mobile Developer Intern at Symph, Cebu City Feb 2026 – May 2026

- Used TypeScript to build full stack features across a Next.js frontend and Nest.js backend inside an Nx smart monorepo, following shared-library and workspace best practices.
- Joined daily standups and sprint planning in an Agile/Scrum workflow, syncing with cross-functional teams to unblock work and stay aligned on sprint goals.

Full Stack Developer – Freelance Nov 2024 – Jun 2025

- Using Next.js I have designed and built a full stack delivery platform web app, covering frontend interfaces and backend integration.
- Converting UI/UX designs using Typescript, TailwindCSS for responsive web experience + connected it to a live database.

Flying Tiger Express: Logistics & Parcel Delivery Platform Feb 2 – May 2026

flyingtigers.express

- Built RESTful APIs in TypeScript and Nest.js secured with JWT authentication, input validation, and role-based access control, protecting platform data end-to-end.
- Optimized SQL and NoSQL queries in Supabase and Firebase and fixed compounding PDF invoice bugs, improving reliability and producing accurate client-facing documents.
- Built a role-based access control system in TypeScript and Nest.js, letting authorized roles approve shipment update requests and view version histories.
- Designed and shipped a RESTful API for a Send Direct Reset Password endpoint, giving users a secure, self-service way to recover their accounts.

- Used EJS on the backend on Nestjs I have fixed the PDF layout and rendering bugs to improved document consistency platform-wide.

RubberTapAI: AI App for the Rubber Industry

July 2025 – Decemer 2026

rubbertapaiadmin.netlify.app

- Trained and deployed a TensorFlow computer vision model in React Native, detecting rubber tree diseases from photos on Android whether the user was online or offline.
- Built REST APIs and WebSocket channels in Node.js/Express, delivering real-time diagnosis results as the sole developer on the system.

Pet Care Pro: Multi-role Pet Services Platform

Nov 2024 – Jun 2025

pet-care-pro.vercel.app

- Architected five role-based web apps using React and Next.js with Firestore, giving vets, sitters, and pet stores their own tailored dashboards.
- Owned the full development lifecycle from Firestore schema design to frontend, delivering real-time booking updates as the sole developer across all five portals

ChutUpp: Real-time Secure Chat App

Dec 2025 – Current

chut-upp.vercel.app

- Chose Go for its speed and concurrency support and WebSockets over polling to keep messages instant, then designed the PostgreSQL schema – delivering a secure, low-latency chat app as the sole developer.

Tech Stack

Framework: React, React Native, Next.js, Vue.js

Frontend: TypeScript, JavaScript, HTML, CSS, Kotlin

Backend: Go, Node.js/Express, Nest.js

APIs: RESTful API design, JWT, WebSockets

Databases: SQL (PostgreSQL, MySQL), NoSQL (Firebase, Firestore, Supabase, Appwrite, MongoDB)

Tools: Figma, Git, GitHub, ClickUp

Awards & Recognition

- Innovate Cebu 2026 Semi-Finalist (Visayan Electric Co. track)
- UC CCS 11th ICT Congress – 2nd Place, Networking
- Hack4Gov 2025 – Region 7, 8th Place
